

```

import java.util.ArrayList;
import java.util.Scanner;
public class booksearch {
    public static void main(String[] args)
    {
        ArrayList<String> books=new ArrayList<>();
        books.add("The Great Gatsby");
        books.add("to kill a Mockingbird");
        books.add("The lord of the Rings");
        books.add("Pride and Prejudice");
        books.add("The catcher in the Rye");

        Scanner scanner =new Scanner(System.in);
        System.out.print("enter a word to search in book titles");
        String Searchword=scanner.nextLine().toLowerCase();

        boolean found=false;
        System.out.println("\n books containing \""+Searchword+"\"");
        for(String book:books)
        {
            if(book.toLowerCase().contains(Searchword))
            {
                System.out.print(book);
                found=true;
            }
        }
        if(!found)
        {
            System.out.println("no matching books found");
        }
        scanner.close();
    }
}

```

Output

enter a word to search in book titles Kill

books containing " kill":
to kill a Mockingbird
